

Cover Letter

Dear Hiring Manager,

I am excited to apply for Software Engineering, Full Stack Development, or related internship opportunities within your organization. I am currently pursuing a Bachelor of Technology in Computer Science at Rishihood University (Newton School of Technology), where I have been actively building production-ready applications, contributing to open-source projects, and gaining real-world development experience.

My strongest skills lie in full-stack web development using React, Next.js, Node.js, JavaScript, Python, MongoDB, and Supabase. I enjoy taking products from idea to deployment, working across both frontend and backend systems while maintaining a strong focus on user experience, scalability, and clean code.

Currently, I serve as a Full Stack Developer Intern at SvaNiti Policy Research Center. In this role, I built and deployed a complete website using TypeScript while handling frontend implementation, backend integration, and deployment responsibilities. Beyond development, I continue to maintain the platform, manage updates, and ensure reliable performance. Working as the primary developer has strengthened my ownership mindset and taught me how to independently solve technical challenges in a production environment.

Alongside my internship experience, I have developed several substantial projects. One of my most notable projects is Weavers, an AI-powered freelancing platform where clients post projects and freelancers complete them. The platform automatically generates milestones, verifies completed work through AI systems, and manages escrow-based payment release workflows. Building this project deepened my understanding of full-stack architecture, AI integration, and product design.

I also created CampusPilot, a centralized event and hackathon management platform designed to streamline student communication and event coordination. Additionally, I developed a commercial restaurant website that was successfully delivered to a real client, giving me valuable exposure to client requirements, feedback cycles, and professional software delivery.

Beyond technical development, I actively engage with the broader technology community. During Hacktoberfest, I contributed to multiple open-source repositories and achieved Super Contributor status with 17 merged pull requests. I have also participated in hackathons and university technology initiatives, experiences that have strengthened my teamwork, leadership, and problem-solving abilities.

What I bring to a team is not only technical capability but also curiosity, ownership, and a willingness to learn quickly. I enjoy tackling difficult problems, collaborating with other developers, and continuously improving my engineering skills. My long-term goal is to become an engineer capable of building impactful products used by thousands of people, and I am eager to learn from experienced professionals while contributing meaningful value from day one.

Thank you for taking the time to review my application. I would welcome the opportunity to discuss how my background, projects, and enthusiasm for software development can contribute to your team. I look forward to hearing from you.

Sincerely,

Garvit Gandhi
